

Deciding on a Science Fair Topic

To decide on a **science fair topic** consider each of the following questions:

1. What area of science am I interested in? (life, earth, environmental, biotechnology, physics, chemistry, engineering, computer technology)
2. Would rather do an experiment, an innovation or a study? (experiment has background research and a lab, innovation has background research and an invention, study involves research but can have lab components as well)
3. What could I do? (brainstorm some ideas by yourself and write them down)
4. Where would I carry out my work?
5. What resources (materials and books and experts) would I need? Who could help me get them?
6. How would I proceed?
